**AvFab Receives Russian Approval For Installation Of Aft Jump Seat In  
Beechcraft B300 & B350 Aircraft**

**Clinton, MO – April 29, 2015** – Aviation Fabricators (AvFab) recently announced they have received Russian approval for the installation of their Supplemental Type Certificate (STC) approved King Air Aft Jump Seat Kits in Beechcraft B300 (350) series aircraft.

In addition, AvFab has STC approval in the U.S., EASA, Brazil, Mexico, Canada and Indonesia.

“This approval is another big product milestone,” said AvFab’s GR Lowe. “Now operators in Russia will be able to realize the significant versatile advantage of adding our Aft Jump Seats Kits to their aircraft. We will continue to add more and more countries to our list of approvals for the seats.”

The jump seats fold down from the side wall of the aircraft in the aft baggage compartment. The seats are interchangeable with the OEM jump seat and can utilize the existing OEM hardware if the aircraft is so equipped. If the aircraft has not been previously equipped with an installation kit, the AvFab kit can be used to make the installation.

The kit includes all installation hardware, brackets, parts, the seat (un-upholstered), complete restraint system, life vest, overhead lights, vents, oxygen drop-downs, and installation instructions. AvFab generally has kits in stock and available for immediate world-wide shipment.

AvFab provides inspection, repair and overhaul of corporate and Special Mission aircraft interior parts and components, and is also an FAA-PMA producer of custom aircraft seating, parts and components. AvFab’s sister company, Central Airmotive, is a comprehensive supplier of Original Equipment Manufacture interior products such as seats, divans, tables, toilets, cabinets and dividers. Central Airmotive currently has over 90,000 sq. ft. of OEM seats and cabin components. Together they represent a “one-source” solution to any corporate aircraft interior need.
